

Portable unit with multiple spray heads and computer control

All new truck wash system. Meets EPA requirements for removing contaminated soil prior to entering public roadways. Optional deodorising at the same time.

Deodouriser currently work with:

Sydney Water at:

- Bondi Sewage
- Malabar Sewage
- Wollongong Sewage
- Cronulla
- North Head
- Shellharbour
- Castle Hill

WSN Environmental Services

- Artarmon Waste Transfer
- Auburn Waste Transfer
- Chullora Recycling
- Lucas Heights Landfill
- Eastern Creek
- Ryde
- Belrose
- Seven Hills
- Jacks Gully
- Rockdale

Collex

- QLD Ports Authority
- Dumpex
- Cleanaway
- RDM Environmental
- Cleanaway
- Randwick Council
- Nationwide Oil
- Shoalhaven Water
- Wingecarribee Council
- VEOLIA
- Synergy (Sydney)
- Global Renewables
- Transpacific
- Earthpower
- Thiess

AND MANY OTHERS

System in operation at Trade Waste unit

Air Curtain
On one side of this installation in Noumea, there is a landfill, on the other: A 5 STAR RESORT !

Deodouriser is an Australian Company, specialising in the field of neutralising odourous problems.

Deodouriser design and install atomisation systems for all types of application for both commercial and industrial use. Each system is specifically designed for its desired application to give the maximum possible atomisation with the smallest droplet size, therefore providing the most economic and environmentally friendly neutralisation.

Deodouriser personnel offer service and maintenance contracts to its customers.

Deodouriser Air Curtains used to neutralise odours escaping from odorous locations to control a large area.

Deodouriser dispensing systems range from direct dosing using high and low water pressure. Pressurised systems range from 100psi to 1200 psi. This is delivered through a high-pressure hydraulic hose line and fittings to very fine stainless steel spinner assisted brass base nozzles to give optimum atomisation. The finer the atomisation, the more effective the cooling and odour neutralisation becomes.

Deodouriser systems are controlled by a computerised PLC unit. The unit can be programmed to provide a variety of timing requirements as well as connected to: odour sensors, dust sensors and heat sensors, producing the most effective applications required.

Deodouriser Mobile Trailer System. Our new Mk IV trailer system is fully automated having adjustable spray booms, 1,000 ltr storage tank, 6.5 Hp electric start motor, high pressure pump (1,000 Psi) Controlled via PLC computer, spraying at selected intervals using "Deodour Air". Ideal for open air situations, landfills, building sites and decontamination of soils.

RENT - LEASE - BUY

Deodouriser also provide specialist units such as the Fluid Dosing Unit for use with wash-down applications and Porta-Loo re-charging and fans modified for cooling with atomized water or deodourising by dosing the water prior to spraying. These are all custom designed for the specific application.

We are happy to survey your site and suggest a solution for your specific needs

Our **Grease Trap** unit is designed to fit the smallest pump out truck, enabling operators to enter underground facilities with ease. It effectively neutralises the odours associated with Grease traps or Septic pumps allowing extended hours of operation in built up areas.

OUR PRODUCT

"Deodour Air" is a high-tech odour treatment that chemically encapsulates and pulls the source of the offending odour into itself, complexing and neutralising it.

"**Deodour-Air**" does not cover up odour, it destroys it. It replaces malodours with a pleasant fresh fragrance, penetrating right to the base of the offending odour, relentlessly destroying it. The essential oils in "Deodour-Air" act as an insect repellent and control heat and dust problems as well as having anti bacterial properties

"**Deodour-Air**" is completely biodegradable and is a non-hazardous chemical as per the Australian Workcover recommendation.

"**Deodour-Air**" is a mixture of cationic and non-ionic surfactants coupled with essential oils, odour absorbers and emulsifiers that act to reduce the surface activity of the source of the malodours. It reduces and neutralises the vapours and particular matter causing them to stop producing odour.

"**Deodour-Air**" is a water based compound that is infinitely dilutable in water. Dilution rates are subject to application, ranging from 20 to 1, to 1000 to 1

Deodouriser Pty Ltd is a support focussed organization. Whatever your query about our systems or products, be it a request for information on a new system or a technical enquiry, please feel free to contact us.
